

S&P Global

US Conference of Mayors Metro Economies

January 17, 2025

Jim Diffley

Executive Director

+1 339 223 5765

jim.diffley@spglobal.com

- S&P Global Market Intelligence estimates that GDP rose 2.8% in 2024 and forecasts 2.7% growth in 2025 and 1.8% growth in 2026.
- As GDP growth slows the unemployment rate gradually rises, reaching a peak of 4.8% in 2027.
- We include the net effect of our take on policies likely to be implemented by the incoming Trump administration and Republican-controlled Congress: personal and corporate tax cuts, tariffs, a crackdown on undocumented immigration, and deportations.
 - Personal and corporate tax cuts are expected to boost growth, while tariffs, slower immigration, and deportations are expected to subtract from growth.
 - Consumer price inflation, which has eased into 2025, turns back up beginning in the second quarter as tariffs push domestic prices higher.
 - The Federal Reserve responds by pausing its easing cycle in mid-2025. This, in turn, will support higher interest rates, a stronger dollar, and tighter financial conditions that will weaken aggregate demand in the near term. Furthermore, we expect foreign countries to respond with retaliatory tariffs on US exports.

-

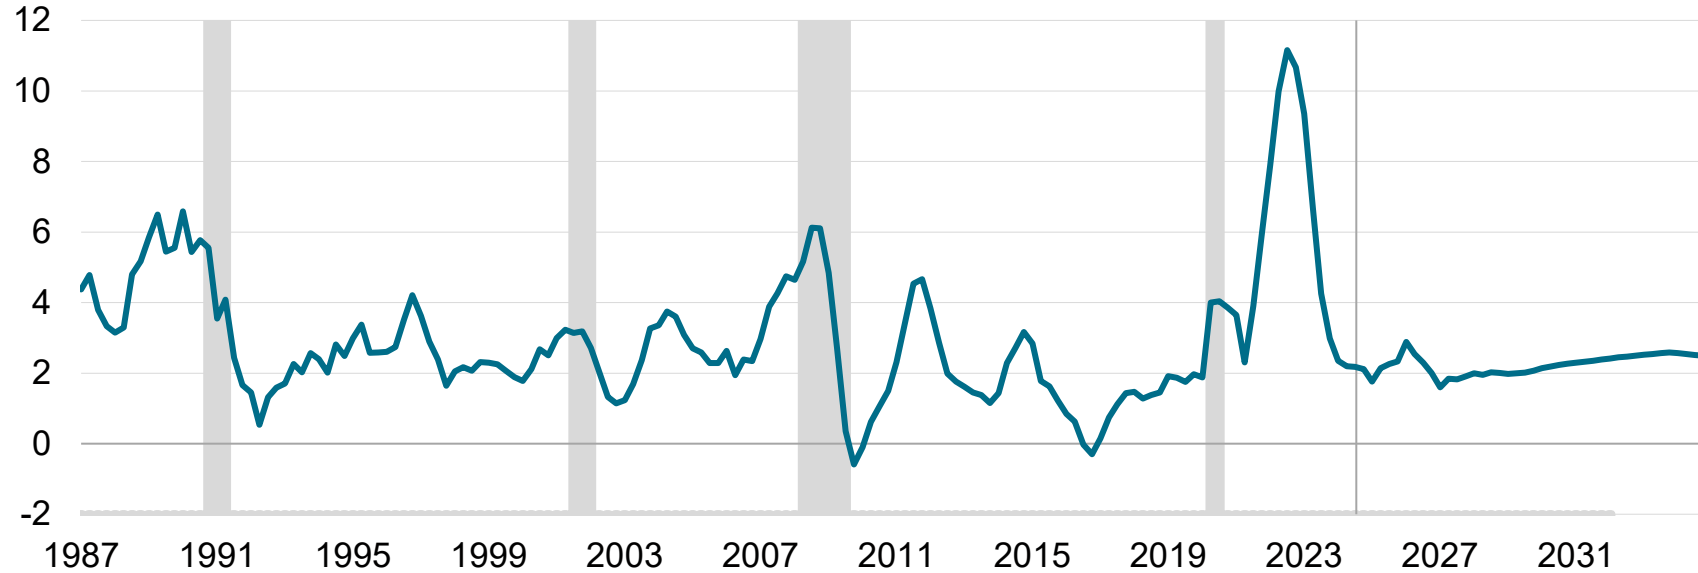

US Forecast Brief

- Fallout from tariffs is expected to prove damaging to US economic activity. This forecast assumes the implementation of a 10% universal tariff and a 30% tariff on imports from mainland China. This gives rise to a period of elevated inflation, to which the Federal Reserve is forecast to respond by pausing its easing cycle in mid-2025. This, in turn, gives rise to tighter financial conditions than in our November baseline, which will weaken aggregate demand. Furthermore, we expect foreign countries to respond with retaliatory tariffs on US exports.
- Deportations combined with a sharply reduced inflow of immigrants will reduce US aggregate supply and aggregate demand. This forecast assumes net international migration will be reduced, relative to Census projections, by about 500,000 per year during the four years of the Trump presidency.
- This will create labor shortages and increased wage pressure in some industries, reinforcing inflation resulting from tariffs. A reduced immigrant population, moreover, will immediately reduce consumption demand and eventually reduce housing demand and construction.

12-month inflation in food prices has stabilized near 2%

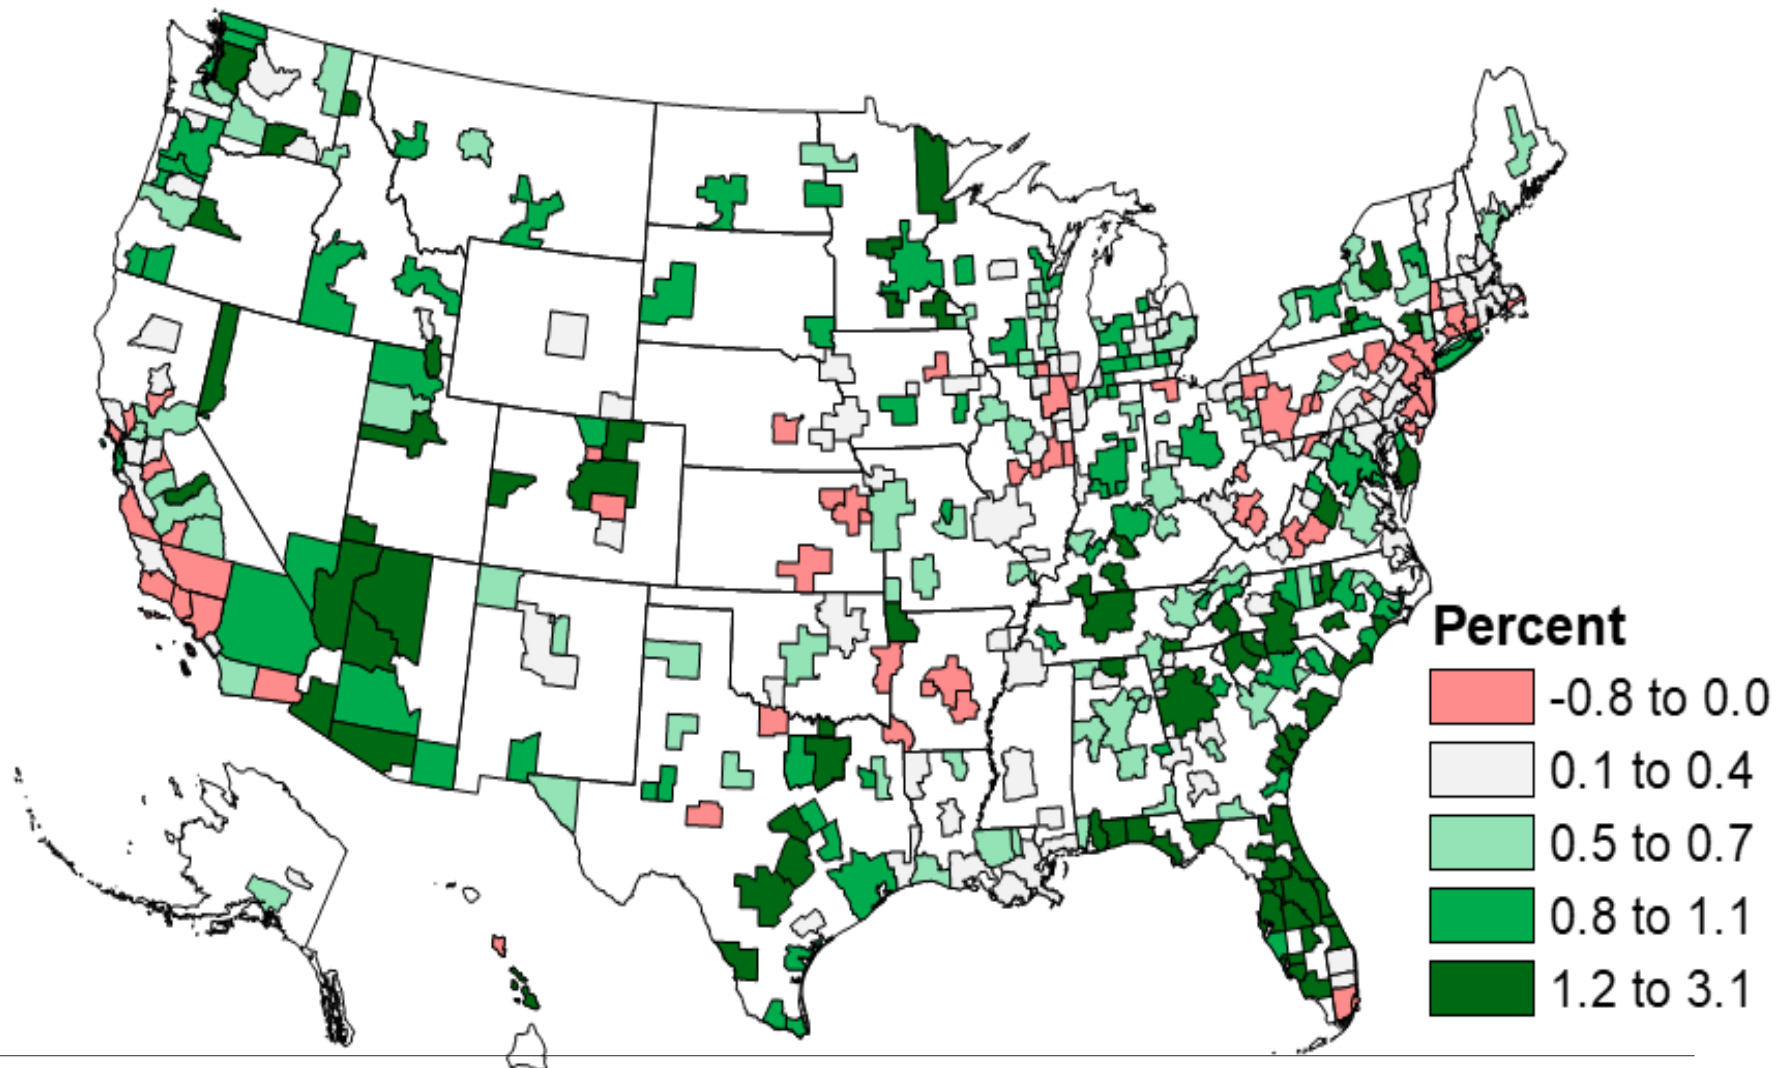

Consumer Price Index for food and beverages, NSA

Percent change from a year earlier

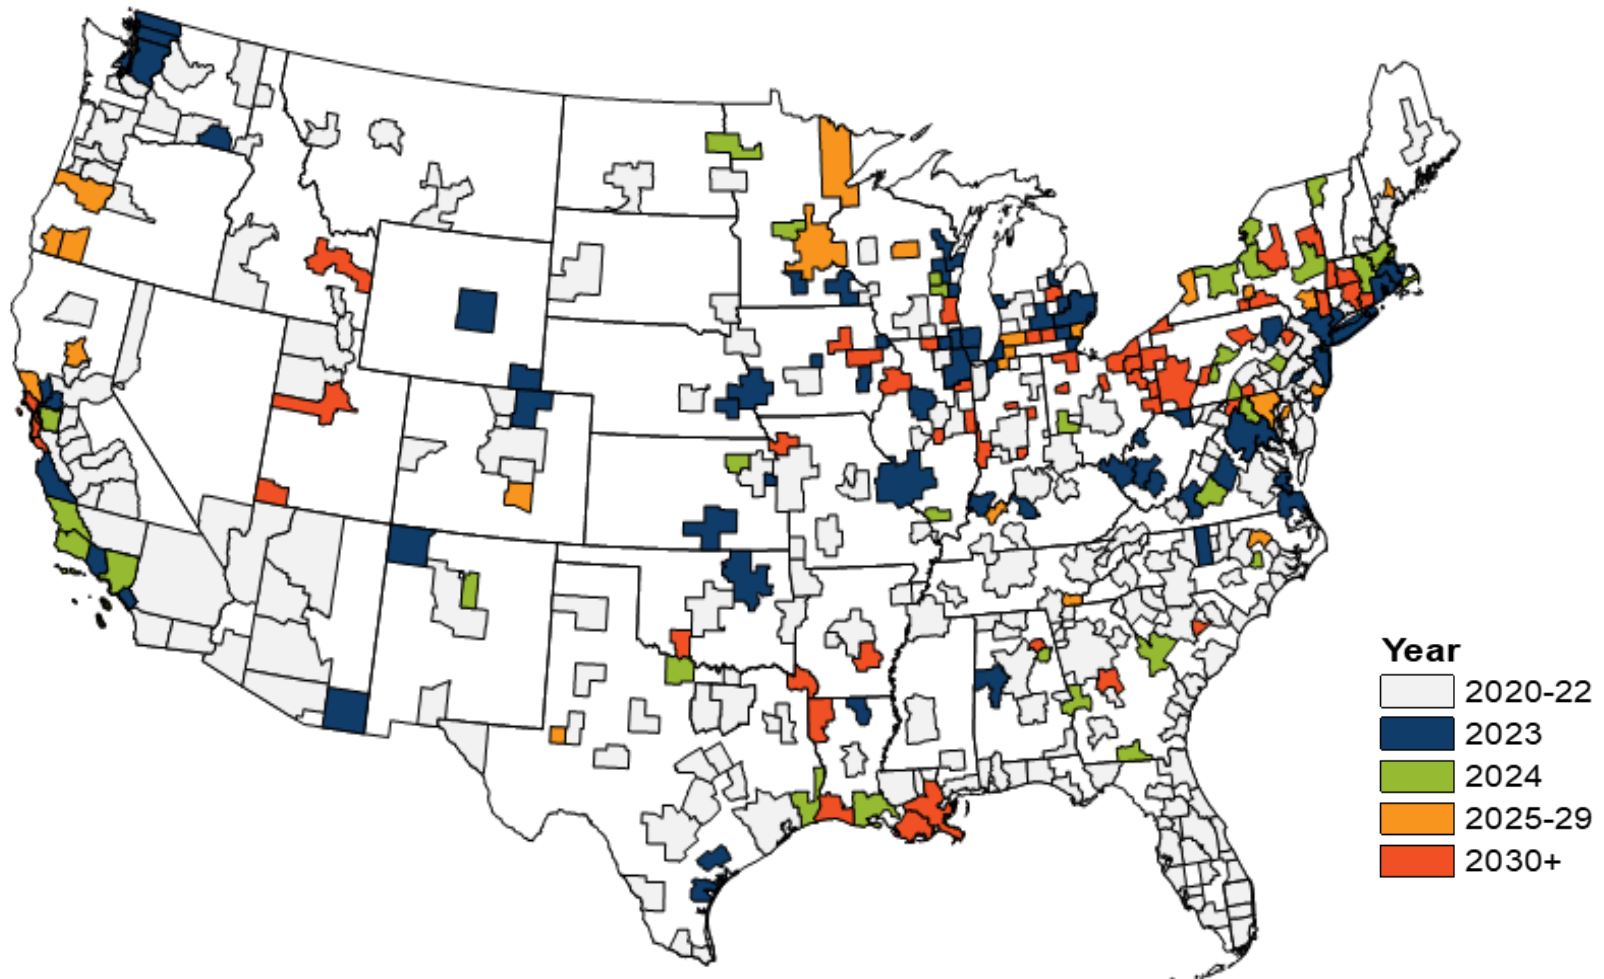

Data compiled Dec. 20, 2024.

Projected Job Growth 2025

Return to pre-Covid Employment (322 metros before 2025)

Metro Contributions to US Economy

- Metros account for 88.0% of US employment,
 - and 90.4% of US GDP.
 - In 2024 metros contributed
 - 76% of employment growth, and
 - 93% of GDP growth
- 79% of metros have returned to their pre-pandemic peak job levels

The US economy can thrive only if metro economies thrive.
