STATIONARY ON-STREET SIDE LOADING CONTAINERS

BY

CONTENUR

A PICTURE IS WORTH A THOUSAND WORDS

ADVANTAGES IN THE WASTE COLLECTION OF DENSELY POPULATED AREAS

Collection cycle of 35 seconds.

Automatic operation, no manual work required.

Reduced operation space.

Less trucks and bins are required.

Completely sealed containers, rodent-resistant and weatherproof.

Containers made of plastic (no corrosion, less noise, easier to clean).

Reduced number of spare parts allow for easier maintenance.

CONTENUR takes care of everything (manufacture, installation, maintenance, cleaning...).

CONTENUR

WHY CITIES CHOOSE THIS SYSTEM?

01 Efficiency: Fastest collection cycle in the market (35 seconds). Waste collection opex can be reduced and resources freed for other activities

02 Open system, several suppliers for bins and trucks

03 This system enables direct interaction with the citizens using the containers as an interface (IoT)

04 Allows for high-capacity collection in constrained spaces, avoiding problems with existing trees

05 Safest system as trucks do all the work, no overhead lifting, reduction of accidents

06 Best solution to mitigate rodents and avoid leachates spilling into the ground (containers completely sealed)

07 CONTENUR has ample experience installing and managing similar programs worldwide (Madrid, Singapore, Abu Dhabi, etc)
